Color image demosaicing

A special case of *super-resolution*, which is used daily in most digital still cameras, is the process of *demosaicing* samples from a *color filter array (CFA)* into a full-color RGB image.

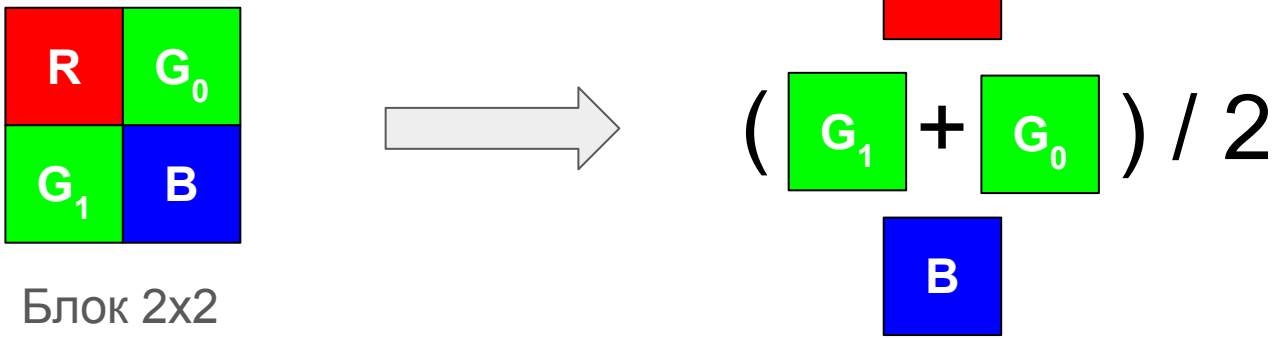
Простейший подход

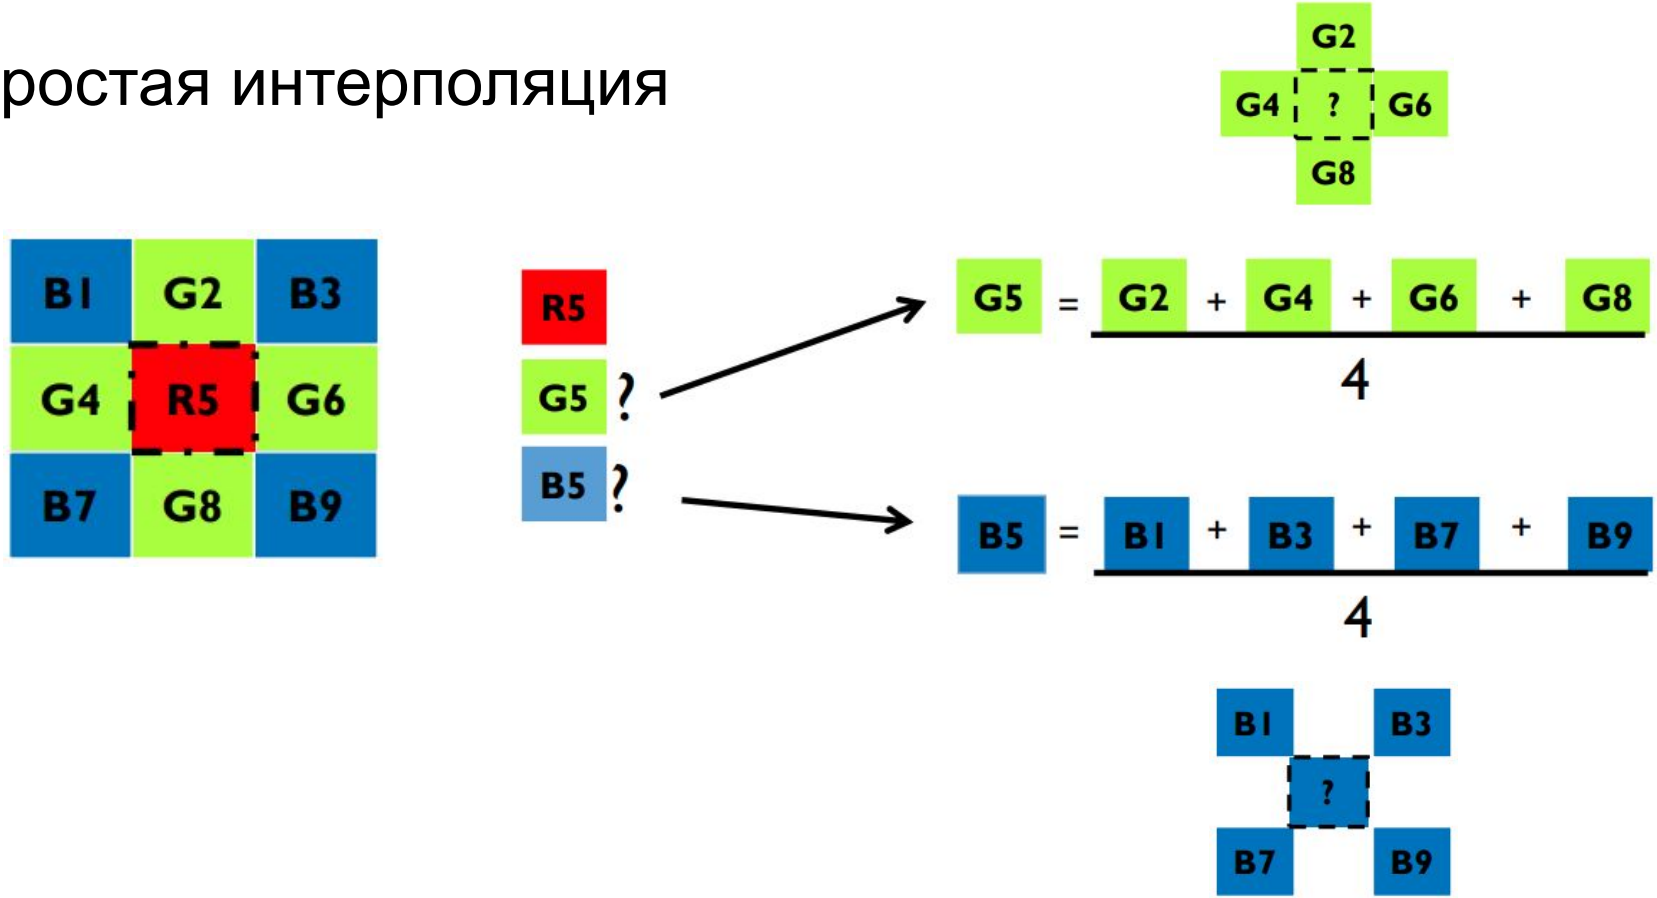
Усреднение блока из 4-х пикселей:



Блок 2x2

1 RGB
пиксель

Простая интерполяция



Источник:
[ICCV 2019 Tutorial: Understanding Color and the In-Camera Image Processing Pipeline for Computer Vision]

Простая интерполяция с учетом “границ”

If (|G2–G8) && |(G4-G8)| both < Thres):

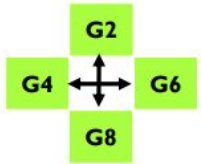
$$G5 = \frac{G2 + G4 + G6 + G8}{4}$$

elseif (|G2-G8| > Thres):

$$G5 = \frac{G4 + G6}{2}$$

else:

$$G5 = \frac{G2 + G8}{2}$$



Case 1

All about the same.

Case 2

G2 and G8 differ – ignore them in the interpolation

Case 3

G2 and G8 differ – ignore them in the interpolation

Задание

Seminar_2_demosaicing.ipynb

Попробуйте разные алгоритмы демозаикинга на изображениях из RobotCar. Найдите участки с артефактами и сравните их между собой.
